DETAILED ACTION

Claims

1. Claims 1-20 are pending.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 19 December 2001 was considered by the examiner.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, 9-14, 17 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by CH 672564A (the Swiss abstract).

The Swiss abstract teaches easily-made (advantage section) bus bars having cylindrical shapes (Figure 3) with flat centers and at least two raised areas circumferentially around the center (Figure 2). The bars are coated with epoxy using dip coating (first paragraph of the CH 672564A abstract).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herbert (US 5,683,742) in view of the Swiss abstract.

Herbert teaches the coating of substrates after treating them with nonwetting materials so that only portions of the substrates are coated. The substrates may be cylindrical (claim 1 of the patent) and may be dip coated (col. 5, line 31).

Herbert fails to teach substrates having the shape claimed.

The Swiss abstract is discussed above.

The references are analogous because both deal with coating cylindrical objects.

It would have been obvious to one having ordinary skill in the art at the time that the invention was made to employ the Swiss abstract's substrates in the coating processes of Herbert in order to produce coated cylinders in which only some areas are coated.

The motivation to employ the Swiss abstract's substrates in the Herbert coating processes is found in the advantage section of the abstract, where the Swiss busses are said to be easy to make.

Art Unit: 1772

It is deemed desirable to make busses having uncoated areas thereon easily in order to facilitate handling.

The shape of the coated busses or portions thereof is deemed a matter of design/engineering choice.
